ABSTRACT

This article discusses the concept of economics and economic development, and provides detailed information about economic development and its main factors. The article also highlights the problems of economic development and the elimination of problems related to poverty reduction in our country..

Keywords. Economic development, poverty reduction, small business, private entrepreneurship, labor, labor force, production, economic reforms.

Introduction

During the years of independence, a number of works were carried out in our country to implement economic reforms and private entrepreneurship. Especially in this regard, attention was paid to the sphere of small business and private entrepreneurship, the creation of new jobs. In this regard, the concept of economic development is considered one of the important concepts, and the following are acceptable as its main factors.

As a key factor of economic development, labor is primarily a labor activity. Labor is a useful activity of people, aimed at satisfying their needs by influencing the benefits of nature. In addition, labor is the main factor of economic development. In the labor process of production, labor is one of the most important concepts of labor force. The labor force is both a personal factor and a unique creative element of production.

A number of decrees and decisions adopted for the further development of the economic sphere are an incentive for the growth of economic development. In particular, paragraph 3 of the Action Strategy adopted by the President of the Republic of Uzbekistan on the five priority areas of development of the Republic of Uzbekistan for 2017-2021 defines priorities for economic development and liberalization based on:

- Further strengthening of macroeconomic stability and maintaining high rates of economic growth.
- Deepening of structural changes, increasing its competitiveness through modernization and diversification of the leading sectors of the national economy;
- Modernization and accelerated development of agriculture
- Continue institutional and structural reforms aimed at reducing the state's participation in the economy, protecting property rights and further strengthening its priority position, and promoting the development of small businesses and private entrepreneurship.
- full and balanced socio-economic development of regions, districts and cities, effective and optimal use of their existing potential;

The Resolution of the President of the Republic of Uzbekistan "On the organization of activities of the Ministry of Economic Development and Poverty Reduction of the Republic of Uzbekistan, as well as subordinate organizations" and The Decree of the President of

the Republic of Uzbekistan "On measures to radically update the state policy in the field of economic development and poverty reduction" mentions the following tasks:

the tasks of improving the level and quality of life of the population in the regions, in particular poverty reduction, are in many ways directly related to the creation of new and sustainable jobs by increasing competitiveness all industries and sectors of the economy and the creation of fundamental conditions for the development of entrepreneurship.

As part of the implementation of this decree, practical work is being carried out to promote economic development in the regions and reduce poverty. In this regard, the Decree pays special attention to:

implementation of measures to achieve national goals and objectives in the field of sustainable development;

identification of factors and directions that contribute to their development, taking into account natural resources and labor resources and "relative advantages" of regions;

implementation, increasing the competitiveness of the national economy;

ensuring sustainable economic growth, the concept of socio-economic development of the country, the development of industries and regions.]

Reforms carried out by the President of the Republic of Uzbekistan, decrees and resolutions on poverty reduction are now yielding results. In this direction, propaganda work is being carried out. In particular, the situation with poverty in mahallas (unemployed, low-income families) is studied, and data is collected in each mahalla. The cases of the population included in the "Temir Daftar" were studied and the tasks were set: to teach the population entrepreneurship, improve their professional skills, study the problems of

unemployed women, in order to support young people, the issues of finding information about young people with difficult living conditions in mahallas, attracting them to clubs to improve their professional skills, passion for study, allocate loans for starting business activities are solved. Their goals are being studied. The problem of unemployed women and youth in the country is being studied in the regions, and the only way to solve these problems is to organize refresher courses for single women and women with many children, the unemployed who have expressed a desire to study a profession in accordance with the level of their capabilities and skills required in everyday life for the unemployed.

In connection with the above-mentioned situation, a plan of propaganda programs and activities among higher educational institutions, districts, and secondary schools was developed to study the problems of the population included in the "Temir Daftar", and is being implemented within the framework of working events.

Within the framework of cooperation programs between educational institutions for further improving the quality of education in schools that do not meet the quality requirements, specific tasks are defined. In order to further improve the education system, the level of admission of graduates to higher educational institutions is being increased, problems of improving the quality of education are being solved by organizing master classes and tests for high school students on the basis of cooperation programs between educational institutions.

Conclusion

In our country today, measures are being taken to support the mahalla and the family, to further improve the living conditions of citizens and the social population of Uzbekistan, to create conditions for the low-income and unemployed population, to attract entrepreneurs and young

people to the country, and important measures are being taken to increase their labor activity. This is all a purposeful and productive way of our society.

In order to reduce poverty among the population, President Sh.Mirziyoyev set an effective task to focus on vocational training and education of the population.
