

## ABSTRACT

Siswoyo, Winda Ayu Putri, 2018, The Effect of Quipper School in Reading Comprehension for Senior High School, Thesis, Department of English Education, Rosi Anjarwati, M.Pd.

Key Word : Effect, Quipper school, Reading Comprehension.

The modernization of education make some progress. One of the progress in using technology-based learning media or it called as E-learning. E-learning is an internet base media learning application. One of the e-learning is quipper school. Quipper school is a media that available to some materials and exercises based on curriculum included English. Student can use it to improve their English skill, especially in reading skill. The objective of the research is to investigate the effect of using quipper school student's reading comprehension grade XI in MAN 1 Jombang

It is quantitative research that use Quasi-Experimental Design with non-randomized control pre test-post test. The sample that used in this research are students in XI social class 3 as the control group and the students in XI social 3 class as the experimental group. The data was found by giving test as the one instrument. The test included pre test and post test.

The result of the research is showed by statistical calcuate of ANCOVA. It is showed by the significant value of pre test as the covariat and the significant value of media. Based on the table of ancova, the covariate that showed by pretestscore is .000. It is less than .05 or  $H_0$  is rejected. It means, there was linear correlation between covariat and students' achievement. While, the sig. value of media is .000, it means that  $H_0$  is rejected. It can be concluded that there was linear correlation between covariat and students' achievement, but without the influence of pre-test score, at 95% confidence level, there was significant effect between learning media of quipper school in students achievement.
